Jeff

I am looking forward to this discussion, but have a few big-picture questions that would help me (I think). First, the reason we do not SNUR all chemicals is found on the top of page 2 of Erik's briefing (e.g., downstream reporting) and no doubt has staff implications with work load, but does not this approach address many of our ENGO colleagues' concerns? Second, how is the risk call made? By an margin of exposure (MOE)? If so, is the MOE scenario specific, or are the exposures combined at the receptor level?

Thanks for considering these questions prior to the briefing and for me taking so long to get up to speed.

Cheers!

Michael...
